

ELETTRICO
LIGHTING

OVERVIEW

Elettrico Lighting is a large supplier of LED Lighting fixtures, Drivers and automation systems for indoor and outdoor use.

Besides, Elettrico handles the complete process of designing, supplying, and installing all types of lights, such as decorative, general external, landscape, sports external, landscape, sports courts, and street lighting.

Elettrico is one of the leading lighting distributors in the region with a diverse portfolio of large-scale large-scale projects done in Dubai, Abu-Dhabi, Sharjah, RAK, UAQ, Fujairah, Al Ain, as well as in Saudi Arabia, Jordan, and Palestine and Africa

Since the establishment in 2007, Elettrico Lighting has become well recognized by many developers, architects, Landscapers, consultants, and design professionals in the region due to the quality, honesty, and customer care provided.

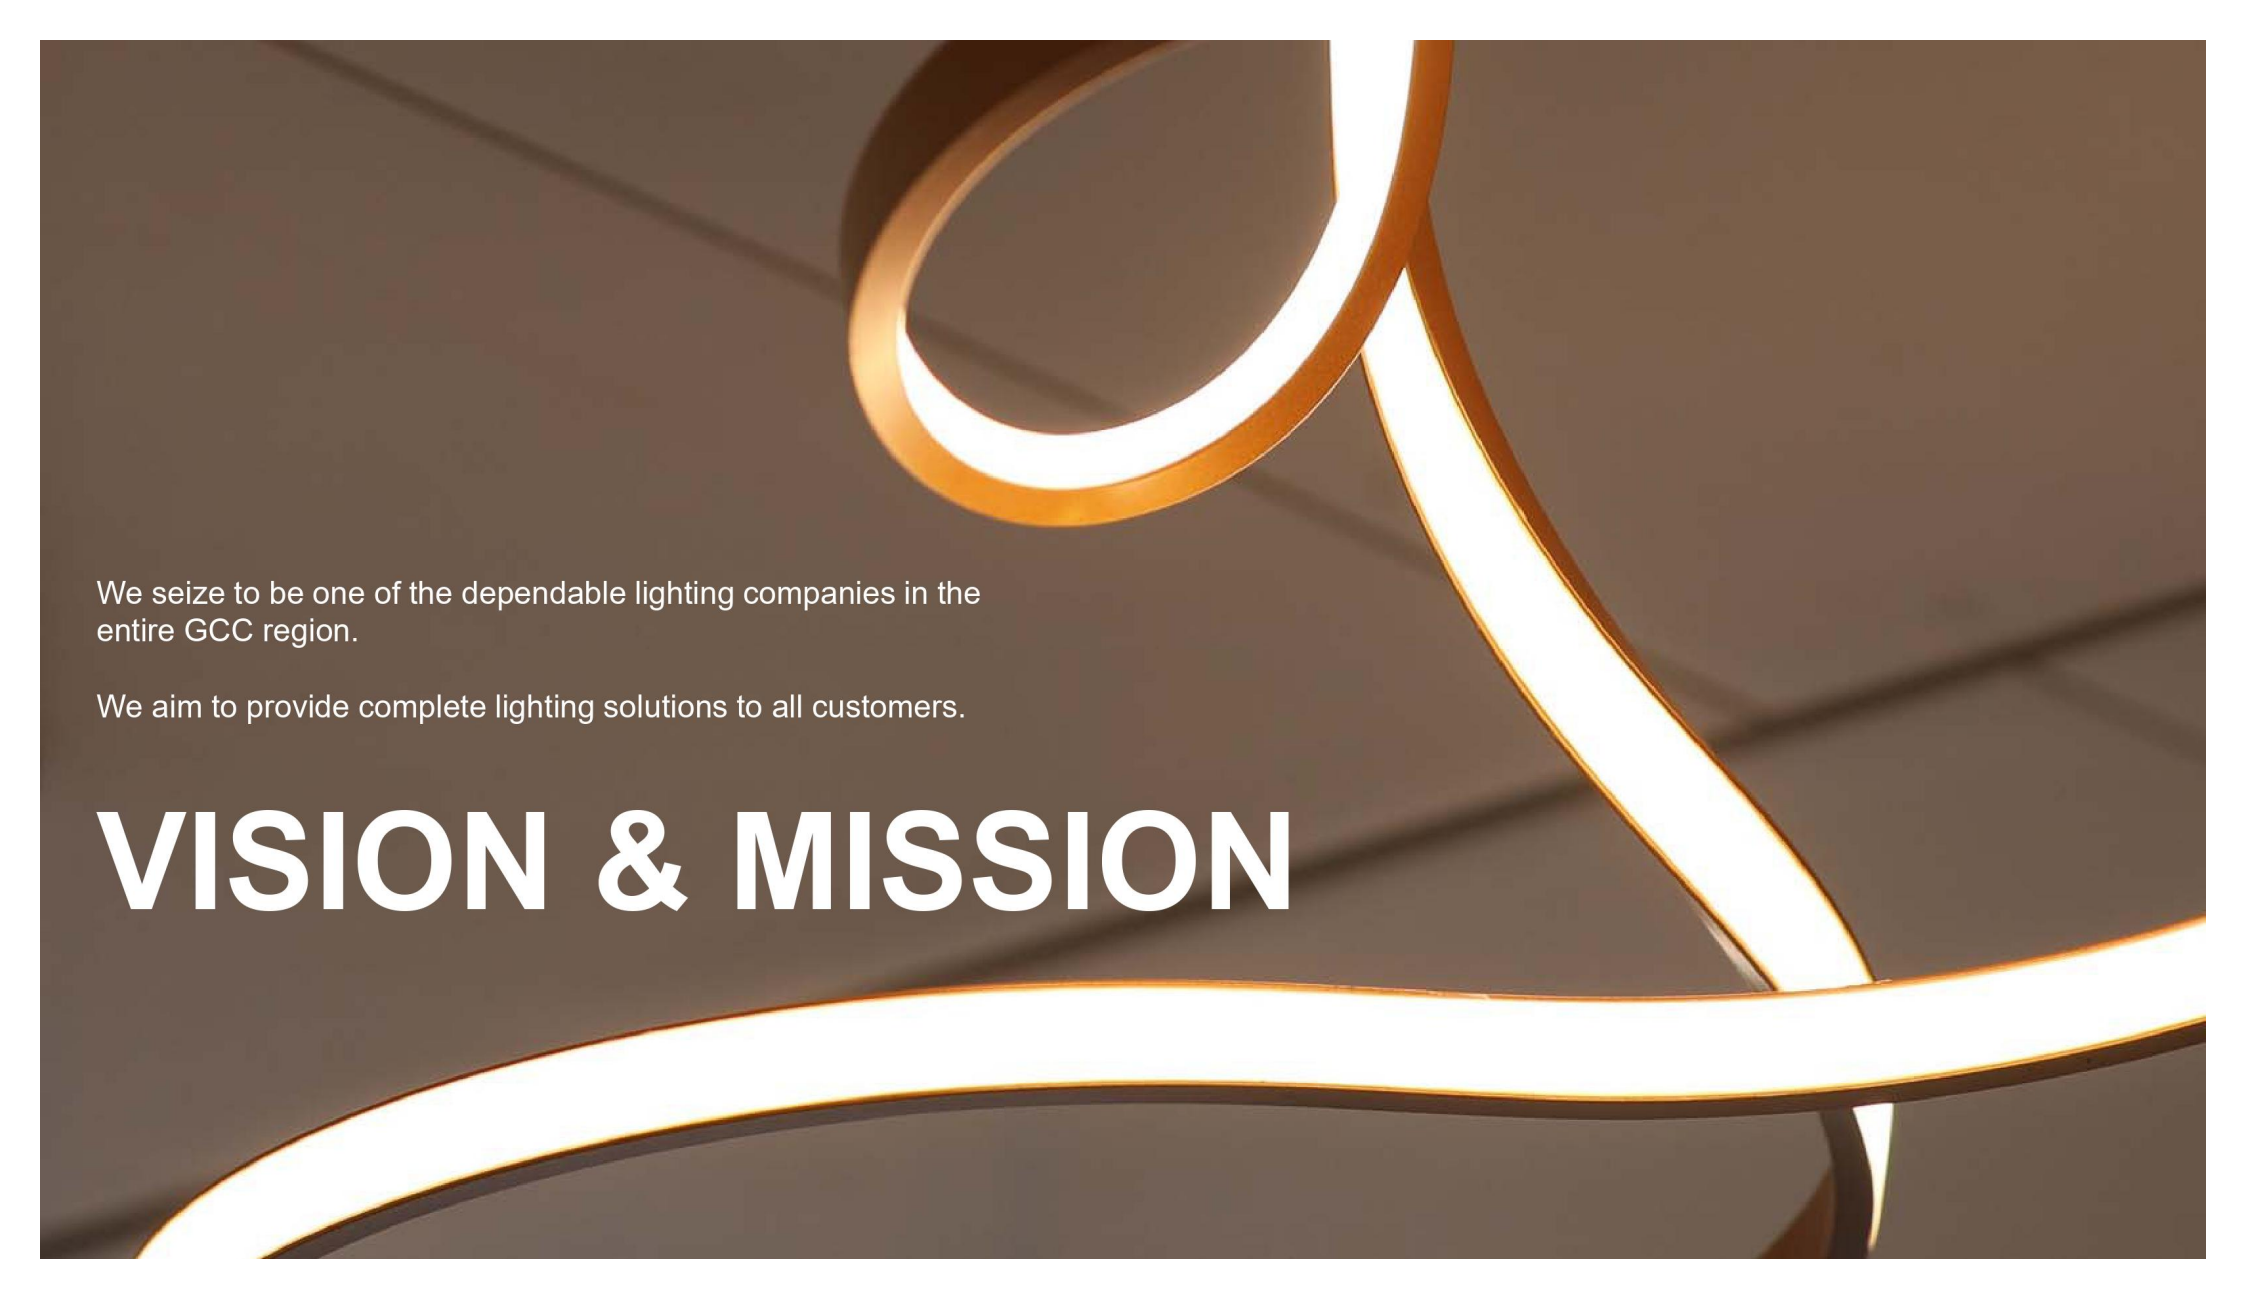

Elettrico Lighting is a member of Al Wafa group of companies, established in 1977 and has been in the forefront over the past 40 years; therefore, it can provide solutions for any lighting requirement.

The company is a recognized leader in the region, marketing a wide range of electrical components serving the regional customer base across the GCC countries, Middle East, Africa, CIS countries, and the Indian sub-continent.

Due to the fully automated operations across the country and the large in-house fleet of delivery vehicles, Elettrico Lighting can cater to clients in all GCC countries and Africa with short lead times.

Who We Are

We seize to be one of the dependable lighting companies in the entire GCC region.

We aim to provide complete lighting solutions to all customers.

LIGHTING CONTROL

HOME AUTOMATION

DECORATIVE LIGHTING

Decorative lighting is a way to enhance the beauty of your home or any living space indoors and outdoors. For a space to be perfect, it is absolutely essential to have a well-designed lighting plan.

Decorative lighting used to be restricted to times of festivity parties, events, or really special occasions. But today homeowners want their living spaces to reflect their own style and taste.

At Elettrico Lighting, you can find a wide range of decorative lights.

A modern commercial interior space, likely a lounge or office area, featuring a large window wall on the right side. The ceiling is white with several large, circular, gold-colored pendant lights hanging from it. The floor is covered in a dark blue, textured carpet. In the foreground, there is a white armchair and a glass display case containing various items. The overall lighting is warm and ambient.

COMMERCIAL LIGHTING

Commercial lighting is lighting used for commercial spaces such as offices, stores, institutions, hospitals, and government buildings. In commercial buildings, accomplishing a task or activity is generally the most important function.

A lighting design/MEP engineering design company should create designs that reflect the type of activity performed in the building to ensure that people working in the space are comfortable and all the lighting requirements are taken into consideration such as the illuminance of the space, the application for which space will be used, the type of light fixture appropriate for space/application and the lux level and uniformity requirements based on guidelines and codes.

At Elettrico Lighting, we can provide you with a complete solution from lighting design and lux calculation to the lighting supply and installation.

SHOWROOM & RETAIL

Lighting is a powerful tool that sets the mood of the store and can be used to draw attention to highlighted products. There are four main types of lighting that are used in a retail setting: Ambient, Task, Accent, and Decorative Lighting. By effectively combining these four different types of lighting you can make your store more effective at drawing customers in and enticing them to purchase items from your store.

At Elettrico Lighting, we can help you with designing and supplying all types of lighting required to present your Showroom/ Retail space at its best.

LANDSCAPE LIGHTING

Landscape lighting refers to the use of outdoor illumination of private gardens and public landscapes; for the enhancement and purposes of safety, night time aesthetics, accessibility, security, and recreation.

Landscape lighting will enhance the beauty, character, and safety of an outdoor area. Path lights for walkways, pathways, and driveways help define the areas and provide safety and security. Accent lights for architecture, trees, plants, and water features will highlight the beauty of the space.

At Elettrico Lighting, you can find a unique range of landscape lights.

FAÇADE LIGHTING

In architecture, the facade of a building is often the most important view from a design standpoint, as it sets the tone for the rest of the building. The facade lighting does not only help to localize buildings and provide security, but it also plays a key role in the architectural expression.

At Elettrico Lighting, we provide outdoor lighting fixtures in different colors, finishes, and types of materials to match the different finishes in exterior building products. All to complement the exterior of the building and the area of use.

SPORT LIGHTING

The purpose of sports lighting is to provide lighting that allows a sport to take place safely (i.e. designed to suit the speed of play and size of any objects used in the sport) and provide good viewing conditions, both in the visibility of the sports action and comfort of the audience. Lighting levels for sports are normally defined in terms of the minimum average horizontal illuminance on a reference plane, and uniformity of illuminance. In some instances, the plane of illuminance will be relevant to the sport and the spectator viewing distance, or TV camera-viewing plane. Here the normal camera illuminance and vertical illuminance will be relevant.

At Elettrico Lighting, we provide a complete solution for indoor and outdoor sports lighting from lighting design and lux calculation to the lighting supply and installation.

A nighttime photograph of a modern urban street. The scene features a curved road with a central landscaped median containing a small tree and shrubs. Tall, slender street light poles with modern fixtures line the road, casting a warm glow. In the background, a tall building with a distinctive crown of lights stands out against the dark sky. The overall atmosphere is sophisticated and contemporary.

STREET LIGHTING

Street lighting is a requirement in all roads and external parks but sometimes these post lights do not fit with the architectural and landscape designs.

At Elettrico Lighting, we provide you with a wide range of street light poles such as conventional, classic, decorative, and modern light poles. Also, we provide decorative solar light poles with a high warranty period. Besides, we can provide a complete solution from design and lux calculation to the pole lights supply and installation.

LIGHTING CONTROL

A good lighting design includes a good control design. Lighting controls play a critical role in lighting systems, enabling users to manually/automatically turn the lights ON/OFF using a switch or a sensor. Also, it helps you adjust the light output using a dimmer.

This basic functionality can be used to satisfy the user's visual needs, reduce energy costs, and improve sustainability.

At Elettrico lighting, we provide you with indoor and outdoor lighting control options.

HOME AUTOMATION

A home automation system is a technological solution that enables automating the bulk of electronic, electrical, and technology-based tasks within a home. It uses a combination of hardware and software technologies that enable control and management over appliances and devices within a home.

At Elettrico Lighting, our intelligent control system allows you to control and manage the equipment in the building through the wall panels, smartphones, tablets, or computers. At the same time, the sensor and logic functions can be combined to make the intelligent control system automatically run related tasks.
